

## **Fronius IG Plus not listed for use in Canada**

The IG Plus is the most recent inverter line from Fronius USA. The inverters incorporate many expanded features that carry benefits for the designer, installer and end customer. Many of these new features, such as a wide range of acceptable wire sizes, integrated string fusing, and integrated lockable DC disconnect, offer flexibility in design and installation and the entire line is currently UL listed for use in the United States.

However, Canadian testing requirements are more stringent and, in specific the input terminals are required to tolerate exposure to Ammonia. Fronius is dedicated to serving the Canadian market and is currently evaluating changing the input terminals required in order to achieve CUL Canada certification. In the interim period, the IG Plus inverters should not be sold to or installed in Canada as the CUL certification is typically required in addition to the UL certifications. We at Fronius are excited about introducing this inverter line to Canada and are committed to moving quickly through the certification process.
