

The intelligent solution for longitudinal seam welding

iSeamer

The iSeamer combines robust mechanical engineering, state-of-the-art welding technology, and the future-oriented Polaris system control to create a powerful platform for demanding applications. Whether steel, stainless steel, aluminum, or nickel-based alloys, the iSeamer offers maximum precision and flexibility for workpieces of various sizes and materials. With its multiprocess functionality, modular design, and intuitive operation, it is the ideal solution for pipe and tank construction, the food, chemical, and pharmaceutical industries, and many other sectors.

Intelligent system control

Polaris offers intuitive process control, simple drag-and-drop programming, and real-time access to all welding parameters – for maximum control and the highest quality welding.

Polaris 10" mobile panel or 21" terminal version

Multiprocess welding

Whether TIG, plasma, ArcTig, or MIG/MAG welding, the iSeamer equipped with iWave masters the optimal welding process for every application and ensures maximum quality and efficiency.
