FORM C TYPE TEST VERIFICATION REPORT

Type Approval and Manufacturer declaration of compliance with the requirements of G98/NI.

This form should be used when making a Type Test submission to the Energy Networks Association (ENA).

If the **Micro-generator** is **Fully Type Tested** and already registered with the ENA **Type Test Verification Report** Register, the **Installation Document** should include the **Manufacturer**'s Reference Number (the Product ID), and this form does not need to be submitted.

Where the **Micro-generator** is not registered with the ENA **Type Test Verification Report** Register this form needs to be completed and provided to NIE Networks, to confirm that the **Micro-generator** has been tested to satisfy the requirements of this EREC G98/NI.

| Manufacturer's reference number | | Primo GEN24 3.6 | | | | |
|---------------------------------|----------------|----------------------------|---------------------------------------|------------------|--|--|
| Micro-generator technology | | transformerless | | | | |
| Manufacturer name | | Fronius International GmbH | | | | |
| Address | | | ter Fronius Str 1 Wels-Thalheim, 7 | Austria | | |
| Tel | +43-7242-241-0 | | Fax | +43-7242-241-224 | | |

| | Connection Option | | | | |
|--|-------------------|--|--|--|--|
| Registered Capacity , use separate sheet if more than one connection option. | 3.68 | kW single phase, single, split or three phase system | | | |
| | | kW three phase | | | |
| | | kW two phases in three phase system | | | |
| | | kW two phases split phase system | | | |

Manufacturer Type Test declaration. - I certify that all products supplied by the company with the above **Fully Type Tested** reference number will be manufactured and tested to ensure that they perform as stated in this document, prior to shipment to site and that no site modifications are required to ensure that the product meets all the requirements of EREC G98/NI.

Signed

| FRONUS/INTERNATIONAL GABH Günter Fickide Stit 242/600 Weit Algaheim Tel: +43/(0) 72 42 /241-0, Fax 47 8 25 | On behalf of | Fronius International GmbH |
|--|--------------|----------------------------|
|--|--------------|----------------------------|

Note that testing can be done by the **Manufacturer** of an individual component or by an external test house.

Where parts of the testing are carried out by persons or organisations other than the **Manufacturer** then that person or organisation shall keep copies of all test records and results supplied to them to verify that the testing has been carried out by people with sufficient technical competency to carry out the tests.

 MATERIALS & SAFETY - R&D

 Operating Range: This test should be carried out as specified in EN 50438 D.3.1.

Active Power shall be recorded every second. The tests will verify that the Micro-generator can operate within the required ranges for the specified period of time.

The Interface Protection shall be disabled during the tests.

In case of a PV Micro-generator the PV primary source may be replaced by a DC source.

In case of a full converter **Micro-generator** (e.g. wind) the primary source and the prime mover **Inverter**/rectifier may be replaced by a **DC** source.

In case of a DFIG **Micro-generator** the mechanical drive system may be replaced by a test bench motor.

| Schon moton | | | | |
|---|------------------|--|--|--|
| Test 1 | | | | |
| Voltage = 85% of nominal (195.5 V) | | | | |
| Frequency = 47.5 Hz | Always connected | | | |
| Power factor = 1 | | | | |
| Period of test 90 minutes | | | | |
| Test 2 | | | | |
| Voltage = 110% of nominal (253 V). | | | | |
| Frequency = 51.5 Hz | Always connected | | | |
| Power factor = 1 | | | | |
| Period of test 90 minutes | | | | |
| Test 3 | | | | |
| Voltage = 110% of nominal (253 V). | | | | |
| Frequency = 52.0 Hz | Always connected | | | |
| Power factor = 1 | | | | |
| Period of test 15 minutes | | | | |
| Remark: During the tests 1, 2 and 3 the unit does not disconnect, tests have been passed. | | | | |

Power Quality – Harmonics: These tests should be carried out as specified in BS EN 61000-3-2. The chosen test should be undertaken with a fixed source of energy at two power levels a) between 45 and 55% and b) at 100% of **Registered Capacity**. The test requirements are specified in Annex A1 A.1.3.1 (**Inverter** connected) or Annex A2 A.2.3.1 (Synchronous).

| NOTE: The operating point in Test (b) and (c) shall be maintained for at least 5 minutes | | | | | | | | |

| Re-connection timer. | | | | | | | | |
|----------------------|--|--|--|--|--|--|--|--|
| Test should | Test should prove that the reconnection sequence starts after a minimum delay of 60 s for | | | | | | | |
| restoration of | restoration of voltage and frequency to within the stage 1 settings of Table 2. | | | | | | | |
| Time delay | Measured | | Checks on no reconnection when voltage or frequency is | | | | | |
| setting | delay | | brought to just outside stage 1 limits of table 2. | | | | | |
| 60.0s | 60.0s 86s At 257 V At 191.5 V At 47.9Hz At 52.1Hz | | | | | | | |
| | Confirmation that the Micro-generatorConfirmedConfirmedConfirmedConfirmeddoes not re-connect.ConfirmedConfirmedConfirmed | | | | | | | |

| Fault level contribution: These tests shall be carried out in accordance with EREC | | | | | | | | |
|--|-----------------|-------|---------------------|---------------------|------------|--|--|--|
| G98/NI Annex A1 A.1.3.5 (Inverter connected) and Annex A2 A.2.3.4 (Synchronous). | | | | | | | | |
| For machines with electro-magnetic output | | | For Inverter | For Inverter output | | | | |
| Parameter | Symbol | Value | Time after fault | Volts | Amps | | | |
| Peak Short Circuit current | i _p | | 20ms | 17.4 | 51.6 | | | |
| Initial Value of aperiodic current | A | | 100ms | 15.5 | 23.8 | | | |
| Initial symmetrical short- circuit current* | k | | 250ms | 15.2 | 15.4 | | | |
| Decaying (aperiodic) component of short circuit current* | i _{DC} | | 500ms | 15.11 | 11.1 | | | |
| Reactance/Resistance Ratio of source* | ×/R | | Time to trip | 0.09 | In seconds | | | |

For rotating machines and linear piston machines the test should produce a 0 s - 2 s plot of the short circuit current as seen at the **Micro-generator** terminals.

* Values for these parameters should be provided where the short circuit duration is sufficiently long to enable interpolation of the plot

| Logic Interface. | Yes |
|---|-----|
| Self-Monitoring solid state switching: No specified test requirements. Refer to EREC G98/NI Annex A1 A.1.3.6 (Inverter connected). | NA |
| It has been verified that in the event of the solid state switching device failing to disconnect the Micro-generator , the voltage on the output side of the switching device is reduced to a value below 50 V within 0.5 s. | |
