

# WEATHER AND YIELD FORECAST

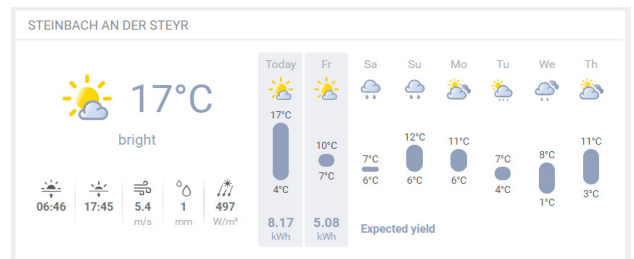

Prepare today for tomorrow.

## Use PV yield forecasts to increase your rate of self-consumption.

Increase your rate of self-consumption by knowing in advance what your PV yield will be over the next 48 hours. The **Fronius Solar.web Premium feature** supplies you with all the information you need to intelligently plan your energy consumption and harness the majority of the PV electricity you generate for your own usage.

## Comprehensive weather widget

The yield forecast is based on a detailed weather display. This supplies the latest weather data for your exact location on an hourly basis and shows you your expected PV yield for the next two days.

## Predicting your PV production

As a Fronius Solar.web Premium user, you will find the precise hour-by-hour yield forecast for the next 48 hours on the energy balance view. You can then use this information to intelligently plan your energy consumption over the coming two days. So you can increase your rate of self-consumption and even cut your energy bills through greater independence from the grid.

Improve your rate of self-consumption by using your household appliances at times when your PV yield will be high.

If you already know in the evening that the next day's PV yield will be high, you can wait until the following morning before switching on the dishwasher or washing machine. Timers, smart home devices and other modern aids make it possible to use energy when you want to.

The yield forecast offers even more potential for optimisation when used in conjunction with PV systems with battery storage or equipment such as a wallbox.
