

FRONIUS SERVICE PARTNERS - OUR LOCAL SOLAR EXPERTS

State school in Thailand relies on the expertise of a Fronius Service Partner

Nakhon Si Thammarat, Thailand: We can rely on them at Fronius – our Fronius Service Partners. One such partner is our local solar expert Nakhon Energy, who installed the 277-kWp PV system at the Benjamachutit school.

Our experience has shown that customers around the world feel reassured to have a local contact to turn to. The Fronius Service Partner programme was established to satisfy this demand. The trained installers can provide professional advice and support with everything from planning through to maintenance needs. In addition, they are also able to replace PC boards. This means that, in the event that maintenance is required, they may replace a defective component in just a single visit. Servicing can also be carried out extremely quickly and with no great disruption, so that school operations are not disturbed in the slightest.

Safety is at the top of the list of priorities for public buildings. Here too, you can rely on Fronius: continuous fault current monitoring is a permanent feature of all our inverters. If any irregularities occur, the unit switches off automatically and informs the installer.

OUR SOLUTION:

- / Fronius Service Partners are local to the customer
- / From planning through to maintenance: expert support in the customer's language
- / Integrated safety devices and automatic notification should servicing be required
